

Introducing Sara Alert™ for Universities

Sara Alert™ is a standards-based, open source tool developed to control the spread of a pandemic. Sara Alert automates monitoring and reporting of individuals exposed to or infected with COVID-19 or any infectious disease. Sara Alert enables students and faculty to enter their symptoms daily, providing real time insights to university health staff working to contain the spread of the virus on campus. Sara Alert can help universities safely open campuses through increased efficiency in tracking potential cases, leading to earlier containment of the virus and reduction of burden on resources.

Sara Alert offers the following benefits for universities:

- **Rapid identification** of exposed individuals, enabling university health to contain the spread
- **Ensure** students or faculty sick with COVID-19 are immediately referred for care
- **Secure information** exchange that protects individuals' data and allows for real-time updates
- **Reduce burden** to university health staff through automated workflow
- **Rapid response** and prioritized help to students and staff who need it most
- **Preventing further spread** by supporting individuals through the period of isolation and quarantine

Universities can use Sara Alert in one of three ways:

Public Health

- Academic institutions may be established as sub-jurisdictions under the direction of current public health jurisdictions
- To learn more about this option, please contact sarasupport@aimsplatform.com

Academic

- Oak Ridge Associated Universities (ORAU) and MITRE are partnering to deploy Sara Alert Academic for universities
- To learn more about this option, please contact info@saraalertacademic.org

GitHub Open Source Code

- Sara Alert's standards-based, open source code is available for download on [GitHub](https://github.com) for anyone to set up their own instance
- To learn more about this option, please contact sarasupport@aimsplatform.com
