

## What's New Improvements

- You can now import Exposure Monitorees with Continuous Exposure turned on (instead of a Last Date of Exposure). **Reminder:** Continuous Exposure extends a monitoree's monitoring period indefinitely. If the monitoree is eligible, they will continue to receive daily reports from Sara Alert until Continuous Exposure is turned off.
- The new SAMS Secure Data Exchange (SDX) import capability allows for direct import of SDX spreadsheets into Sara Alert. The Sara Alert team can provide import guidance by request (please email [saraalert-adopt@mitre.org](mailto:saraalert-adopt@mitre.org)).
- Excel Export "Canned" formats now contain columns for "Reason for Closure," "Closed At," and "Expected Purge Date."

## Usability and Performance

- You can now search by a monitoree's Primary Contact Email Address and Primary Telephone Number using the search bars in the Monitoring Dashboards and the "Move to Household" window.
- Added a column for Primary Contact Primary Telephone Number (called "Phone Number") to both the Monitoring Dashboards and the "Move to Household" window.
- Minor performance improvements on the backend.

## User Documentation Updates

- Minor updates only.

## API Overall Improvements

- No updates in v1.40

## Announcements

- **Reminder for January 2022:** When enrolling monitorees or updating dates in the new year, make sure to double-check that you are inputting the correct year to avoid unexpected behavior
  - Setting an Exposure Monitoree's Last Date of Exposure to January **2021** may cause Sara Alert to close their record
  - Setting an Isolation Monitoree's Symptom Onset Date to January **2021** may cause them to be moved to the Records Requiring Review line list
- Release 1.41 is scheduled for deployment to production on January 25<sup>th</sup>, 2022 at 10pm EST.
